Communication to Examiner

Commissioner for Patents
Washington, D.C. 20231

Sir:

Claims 30-36, 45-47, 49, 50, 55, 56, 61-63 and 66-71 of the parent application No. 09/769,439 were rejected under 35 U.S.C. § 102(e) as being allegedly anticipated by Patterson *et al.*, U.S. Patent No. 5,941,869. The independent claims of this divisional application all generally follow the format of the claims in the parent application, but also recite “a locking device to fix a position of the leading guide wire relative to the infusion guide wire.” Support for this language may be found, for example, at page 18, lines 4-5, page 19, lines 4-5, and page 20, lines 14-21 of the specification of the parent application. This language (which was also recited in the non-elected claim 65 of the parent application) clearly distinguishes over Patterson *et al.*

For the record, Applicants also respectfully disagree with the assertion by the Examiner in the parent application that the catheter of Patterson *et al.* can be used for transvenous entry into the heart and for penetrating the right atrial wall of the heart for entry into the pericardial space. However, Applicants believe that the recitation of the locking mechanism in the claims of this divisional application is sufficient to distinguish over Patterson *et al.* without further discussion of this aspect.

Conclusion

If the Examiner believes, for any reason, that personal communication will expedite prosecution of this application, the Examiner is invited to telephone the undersigned at the number provided.

Respectfully submitted,
